

## RT line Promotional Thermometers

For wall mounting

Folds up to stand

*Thermometers were the first item to be used for promotional purposes. They are ideally suited because they are sure to be given a prominent place and looked at often. Each time your customer checks the temperature, he will see your name.*

### **Liquid crystal thermometers:**

work by reflecting light. The crystals turn with the changing temperature and reflect different colours like millions of tiny prisms. Liquid crystal thermometers are safe and durable, but must be kept away from direct sunshine.

### **Reading the temperature:**

Read the brightest colour. If 2 numbers are equally bright, read the temperature in between. Accuracy is  $\pm 0.5^{\circ}\text{C}$ .

### **Specifications:**

Promotional Refrigerator Thermometer  
Liquid Crystal Thermometer, size 12.7 x 83mm horizontal  
on plastic support, white, size 42 x 102mm horizontal
