

Bimetal Refrigerator thermometer

RT400 Refrigerator thermometer

Clear plastic
Adhesive on the back
Adjustable from front

Use for:
Refrigerators
Freezers
Outdoors

RT400 is an elegant thermometer for refrigerators and freezers. It is totally transparent, so the white wall shows through. It works with a bimetallic coil, is easy to read and does not require any maintenance.

RT400 comes with adhesive on the back so that it can be mounted anywhere inside the fridge. Blue marking for temperatures below zero, and red for temperatures above zero. 5°C (optimal refrigerator temperature) is at '12 o'clock', which makes it even easier to check.

Adjustment of temperature reading can be made from the front, using a small screwdriver.

Specifications:

Measurement range:	-30 + 40 °C
Accuracy	±1°C over full range
Resolution:	1°C
Total diameter	77mm
Scale diameter	54mm
